

Interpretable Machine Learning

Extensions of Linear Regression Models

Learning goals

- Inclusion of high-order and interaction effects
- Regularization via LASSO

INTERACTION AND HIGH-ORDER EFFECTS

$$\text{LM Equation: } y = \theta_0 + \theta_1 x_1 + \theta_2 x_2 + \dots + \theta_p x_p + \epsilon$$

Equation above can be extended (polynomial regression) by including

- **high-order effects** which have their own weights
↪ e.g., quadratic effect: $\theta_{x_j^2} \cdot x_j^2$
- **interaction effects** as the product of multiple feat.
↪ e.g., 2-way interaction: $\theta_{x_i, x_j} \cdot x_i \cdot x_j$

Bike Data		
Method	R^2	adj. R^2
Simple LM	0.85	0.84
High-order	0.87	0.87
Interaction	0.96	0.93

INTERACTION AND HIGH-ORDER EFFECTS

$$\text{LM Equation: } y = \theta_0 + \theta_1 x_1 + \theta_2 x_2 + \dots + \theta_p x_p + \epsilon$$

Equation above can be extended (polynomial regression) by including

- **high-order effects** which have their own weights
↪ e.g., quadratic effect: $\theta_{x_j^2} \cdot x_j^2$
- **interaction effects** as the product of multiple feat.
↪ e.g., 2-way interaction: $\theta_{x_i, x_j} \cdot x_i \cdot x_j$

Bike Data		
Method	R^2	adj. R^2
Simple LM	0.85	0.84
High-order	0.87	0.87
Interaction	0.96	0.93

Implications of including high-order and interaction effects:

- Both make the model more flexible but also less interpretable
↪ More weights to interpret
- Both need to be specified manually (inconvenient and sometimes infeasible)
↪ Other ML models learn them often automatically
- Marginal effect of a feature cannot be interpreted by single weights anymore
↪ Feature x_j occurs multiple times (with different weights) in equation

EXAMPLE: INTERACTION EFFECT

Example: Interaction between temp and season will affect marginal effect of temp

	Weights
(Intercept)	3453.9
seasonSPRING	1317.0
seasonSUMMER	4894.1
seasonFALL	-114.2
temp	160.5
hum	-37.6
windspeed	-61.9
days_since_2011	4.9
seasonSPRING:temp	-50.7
seasonSUMMER:temp	-222.0
seasonFALL:temp	27.2

EXAMPLE: INTERACTION EFFECT

Example: Interaction between temp and season will affect marginal effect of temp

	Weights
(Intercept)	3453.9
seasonSPRING	1317.0
seasonSUMMER	4894.1
seasonFALL	-114.2
temp	160.5
hum	-37.6
windspeed	-61.9
days_since_2011	4.9
seasonSPRING:temp	-50.7
seasonSUMMER:temp	-222.0
seasonFALL:temp	27.2

Interpretation: If temp increases by 1 °C, bike rentals

- increase by 160.5 in WINTER (reference)

EXAMPLE: INTERACTION EFFECT

Example: Interaction between temp and season will affect marginal effect of temp

	Weights
(Intercept)	3453.9
seasonSPRING	1317.0
seasonSUMMER	4894.1
seasonFALL	-114.2
temp	160.5
hum	-37.6
windspeed	-61.9
days_since_2011	4.9
seasonSPRING:temp	-50.7
seasonSUMMER:temp	-222.0
seasonFALL:temp	27.2

Interpretation: If temp increases by 1 °C, bike rentals

- increase by 160.5 in WINTER (reference)
- increase by 109.8 (= 160.5 - 50.7) in SPRING

EXAMPLE: INTERACTION EFFECT

Example: Interaction between temp and season will affect marginal effect of temp

	Weights
(Intercept)	3453.9
seasonSPRING	1317.0
seasonSUMMER	4894.1
seasonFALL	-114.2
temp	160.5
hum	-37.6
windspeed	-61.9
days_since_2011	4.9
seasonSPRING:temp	-50.7
seasonSUMMER:temp	-222.0
seasonFALL:temp	27.2

Interpretation: If temp increases by 1 °C, bike rentals

- increase by 160.5 in WINTER (reference)
- increase by 109.8 (= 160.5 - 50.7) in SPRING
- decrease by -61.5 (= 160.5 - 222) in SUMMER

EXAMPLE: INTERACTION EFFECT

Example: Interaction between temp and season will affect marginal effect of temp

	Weights
(Intercept)	3453.9
seasonSPRING	1317.0
seasonSUMMER	4894.1
seasonFALL	-114.2
temp	160.5
hum	-37.6
windspeed	-61.9
days_since_2011	4.9
seasonSPRING:temp	-50.7
seasonSUMMER:temp	-222.0
seasonFALL:temp	27.2

Interpretation: If temp increases by 1 °C, bike rentals

- increase by 160.5 in WINTER (reference)
- increase by 109.8 (= 160.5 - 50.7) in SPRING
- decrease by -61.5 (= 160.5 - 222) in SUMMER
- increase by 187.7 (= 160.5 + 27.2) in FALL

EXAMPLE: QUADRATIC EFFECT

Example: Adding quadratic effect for temp

Interpretation: Not linear anymore!

- temp depends on two weights:

$$280.2 \cdot x_{temp} - 5.6 \cdot x_{temp}^2$$

	Weights
(Intercept)	3094.1
seasonSPRING	619.2
seasonSUMMER	284.6
seasonFALL	123.1
hum	-36.4
windspeed	-65.7
days_since_2011	4.7
temp	280.2
temp ²	-5.6

EXAMPLE: QUADRATIC EFFECT

Example: Adding quadratic effect for temp (left) and interaction with season (right)

	Weights
(Intercept)	3802.1
seasonSPRING	-1345.1
seasonSUMMER	-6006.3
seasonFALL	-681.4
hum	-38.9
windspeed	-64.1
days_since_2011	4.8
temp	39.1
temp ²	8.6
seasonSPRING:temp	407.4
seasonSPRING:temp ²	-18.7
seasonSUMMER:temp	801.1
seasonSUMMER:temp ²	-27.2
seasonFALL:temp	217.4
seasonFALL:temp ²	-11.3

Interpretation: Not linear anymore!

- temp depends on multiple weights due to season:

↪ WINTER: $39.1 \cdot x_{temp} + 8.6 \cdot x_{temp}^2$

↪ SPRING: $(39.1+407.4) \cdot x_{temp} + (8.6-18.7) \cdot x_{temp}^2$

↪ SUMMER:

$(39.1+801.1) \cdot x_{temp} + (8.6-27.2) \cdot x_{temp}^2$

↪ FALL: $(39.1+217.4) \cdot x_{temp} + (8.6-11.3) \cdot x_{temp}^2$

REGULARIZATION VIA LASSO

► Tibshirani (1996)

- LASSO adds an L_1 -norm penalization term ($\lambda \|\theta\|_1$) to least squares optimization problem
 - ↪ Shrinks some feature weights to zero (feature selection)
 - ↪ Sparser models (fewer features): more interpretable
- Penalization parameter λ must be chosen (e.g., by CV)

$$\min_{\theta} \left(\underbrace{\frac{1}{n} \sum_{i=1}^n (y^{(i)} - \mathbf{x}^{(i)\top} \theta)^2}_{\text{Least square estimate for LM}} + \lambda \|\theta\|_1 \right)$$

REGULARIZATION VIA LASSO ► Tibshirani (1996)

Example (interpretation of weights analogous to LM):

- LASSO with main effects and interaction temp with season
- λ is chosen \rightsquigarrow 6 selected features ($\neq 0$)
- LASSO shrinks weights of single categories separately (due to dummy encoding)
 \rightsquigarrow No feature selection of whole categorical features (only w.r.t. category levels)
 \rightsquigarrow Solution: group LASSO ► Yuan and Lin (2006)

	Weights
(Intercept)	3135.2
seasonSPRING	767.4
seasonSUMMER	0.0
seasonFALL	0.0
temp	116.7
hum	-28.9
windspeed	-50.5
days_since_2011	4.8
seasonSPRING:temp	0.0
seasonSUMMER:temp	0.0
seasonFALL:temp	30.2
